

Borough of Scarborough

ANNUAL REPORT

ON THE

Health, Sanitary Conditions, &c., of the Borough of Scarborough for the year 1943

BY

STANLEY FOX LINTON,

T.D., M.Sc., M.D., D.P.H.

School Medical Officer. Medical Officer of Health. Medical Superintendent of the Corporation Sanatorium.

SCARBOROUGH:

E. T. W. DENNIS & SONS, LD,, Printing House Square, Scarborough.

HEALTH DEPARTMENT,

Town Hall, Scarborough.

July, 1945

MR. MAYOR, LADIES AND GENTLEMEN,

I beg to submit my Annual Report for the year ended 31st December, 1943.

As suggested by the Ministry of Health, it does no more than "deal briefly with subjects of current interest."

I am,

Your obedient Servant,

S. FOX LINTON,

Medical Officer of Health.

To the Mayor, Aldermen and Councillors of the Borough of Scarborough.

Staff		FULL-TIME	PART-TIME

BOROUGH OF SCARBOROUGH

ANNUAL REPORT VITAL STATISTICS

POPULATION.

Registrar-General's estimate (mid-year) 34,980.

BIRTHS.

LIVE BIRTHS.			MALE	FEMALE	TOTAL
Legitimate	• • •	• • .	250	257	507
Illegitimate		• • •	26	24	50
			276	281	557
			degeneralistic di Statistica	programming beliefers to the second	
STILL-BIRTHS		• • •	13	3	16
Depart DAME	15.0				

BIRTH-RATE ... 15.9

This is the highest local birth-rate since 1921, when it was 16.0.

DEATHS.

		MALE 252	Female 328	Total 580
DEATH-RATE		• • •	16.6	
11	corrected	• • •	13.4	

CAUSES OF DEATH.

These are shown in the following table (Registrar-General's figures).

CAUSES OF DEATH DURING THE YEAR 1943.

CAUSES OF D	EAIH	DUKIN	GIRE			
				Registrar General's		
				Fi	g ures	
				MALE	FEMALE

Appendicitis				1	-	
Other digestive diseases		• • •	• • •	5	9	
Nephritis	• • •		• • •	2	6	
Puerperal sepsis		• • •	• • •	-		
Other maternal causes	• • •		• • •	-	1	
Premature birth		• • •		2	-	
Congenital debility and m	alformat	tion, pren	nature	4	2	
birth	• • •	• • •	• • •	4	3	
Suicide	• • •		• • •	-	3	
Road traffic accidents		• • •	• • •	-	-	
Other violent causes		• • •	• • •	3	3	
All other causes		• • •	• • •	27	17	
		T		252	220	
•		TOTALS		252	328	

Comparison of some of these figures with average figures (given in brackets) for the previous 5 years shows:

Tuberculosis (all forms) 19 (20), cancer 64 (81), pneumonia 32 (22), suicide 3 (7), road accidents 0 (5, three years' average).

Mortality from tuberculosis is not rising: it seems, therefore, that the increase in the number of cases notified is due to better ascertainment.

Mortality from cancer is lower than the 5 year average.

Deaths from pneumonia were well above the average; this is not in line with the general experience that pneumonia mortality has been reduced by adequate sulphonamide treatment.

Suicide has become rarer, as it has throughout the country.

It is good to record no Scarborough deaths from road traffic accidents.

INFANT MORTALITY.

Number of deaths under 1 year ... 18
Rate per 1,000 live births ... 32

This is a remarkably low figure, much the lowest that has ever been recorded for the town, the previous lowest having been 41 in 1934. Only two deaths occurred from premature birth; consequently there was an unusually small number of deaths during the first 4 weeks of life. This is the age at which Infant Mortality is least amenable to control. The low Infant Mortality in Scarborough in 1943 was a chance occurrence such as is apt to happen whenever rates are based on small numbers.

The following comparative figures are of interest:

DEATHS PER 1,000 LIVE-BIRTHS.

	b	Under 4 Weeks	4 Weeks to 1 Year	TOTAL
Scarborough	• • •	9.0	23.3	32.3
Greater London (1942)		24.9	21.7	46.6
New York (1942)	• • •	21	7.8	28.8

It will be seen that at ages 4 weeks — 1 year Infant Mortality is nearly three times as high in this country as it is in New York. It is in this age group that there is most room and hope for improvement.

A recent inquiry into Infant Mortality in County Boroughs of England and Wales has shown reason to believe that if all poverty indices were eliminated, an Infant Mortality rate of 23.1 per 1,000 live births would prevail. This is the rate which is, in fact, attained among the "better off" (Registrar-General's Social Class 1). Where on the other hand there is overcrowding, unemployment, low wages, or industrial employment of women, the effect on the Infant Mortality rate is apparent. Among the over-crowded poor the rate is 108. Among the unemployed over-crowded poor 153. The problem is a social as well as a medical one.

MATERNAL MORTALITY.

Deaths from puerperal sepsis ... 0
Deaths from other puerperal causes ... 1

Maternal mortality rates based on the number of births occurring in a single year in a small town are of no value—it is better to take a number of years together. During the five years 1938-42, there were in Scarborough 2,558 live and still births and 14 maternal deaths, of which 2 were from sepsis (including 1 case of abortion) and 12 from other puerperal causes. These figures give the following maternal mortality rates:

Puerperal sepsis — 0.78 per 1,000 live and still births.

Other puerperal causes — 4.7 per 1,000 live and still births.

The sepsis mortality rate is a good deal lower than the England and Wales rate during the same 5 years, which was at least 1.1 per 1,000 live and still births. Mortality from puerperal sepsis has fallen very greatly in recent years, in consequence, no doubt, of the use of sulphonamides.

Our 1938-42 mortality from other puerperal causes was, on the other hand, $2\frac{1}{2}$ times as high as the England and Wales rate, which was 1.83. To put it in another way, we had 12 deaths instead of the 5 which would have corresponded with the England and Wales rate. Some of these deaths could have been prevented if the individuals concerned had takn care to have proper pre-natal supervision.

MATERNITY AND CHILD WELFARE.

This service was transferred in March from King Street to Crescent House.

MATERNITY CLINICS.

Throughout the year the weekly ante-natal and post-natal clinics were held by Dr.

Miss Ealing, the Borough Consultant in Obstretics and Gynaecology, held monthly ante-natal and monthly post-natal consultant clinics, and also a monthly gynaecological clinic; patients found to be in need of operative treatment for gynaecological conditions were admitted to a Nursing Home under Miss Ealing's care; they contribute to the cost according to an income scale. During the year 36 patients were admitted to the Stamford Nursing Home for operation. This service was begun in May, 1941, and the growing use of it shows that it meets a need.

MIDWIVES.

The Corporation subsidises the Scarborough District Nursing Association to provide domiciliary midwifery in the town. During the year the Association midwives attended 183 cases as midwives and 30 as maternity nurses.

The services of Miss Ealing, the Borough Consultant in obstetrics, were available at all times for any doctor in doubt or difficulty with a maternity case.

MATERNITY BEDS.

The Corporation Maternity Ward in the Scarborough Hospital is a unit of 12 beds under the care of Miss Ealing. It is not large enough to meet the demand, and patients were also sent to the County Maternity Home at the Institution in Dean Road, or to a nursing home.

Numbers of admissions were as follows:

Maternity Ward			204
County Maternity Home	• • •		69
Dybdale Nursing Home		• • •	23
Stamford House Nursing	Home		3

In the Maternity Ward 208 babies were born, including 4 sets of twins; 11 were still births.

There were also admitted to the Maternity Ward 28 patients for ante-natal and 2 for post-natal treatment.

There was one maternal death (from eclampsia).

All emergency and abnormal cases are admitted to the Maternity Ward; only normal straightforward cases are sent elsewhere.

CHILD WELFARE.

Weekly clinics at Crescent House and Seamer Road continued throughout the year, with large attendances.

The Health Visitors (2 full time and 1 half time) did as much home visiting as they could, but work at the Centre takes more of their time than it used to. They paid 47 visits to expectant mothers and 3,543 to children under 5.

The weekly orthopædic clinic was held by the Sister from the Adela Shaw Orthopædic Hospital, Kirbymoorside. The Orthopædic Surgeon attends this once a month. Ten children were admitted to the Orthopædic Hospital during the year, 4 at the cost of the Maternity & Child Welfare Committee, 6 at the cost of the Education Committee, 2 tuberculosis cases at the cost of the North Riding County Council, and 2 evacuees paid for on the Evacuation Account.

INFECTIOUS DISEASES.

There was no epidemic of infectious disease during the year. The numbers of notified cases (civilians only) were as follows:

 J/			
Scarlet Fever		• •	68
Whooping Cough			52
Diphtheria	• • •	11-15.00	12
Erysipelas		5 11	. 5
Measles			68
Pneumonia		• • •	9
Puerperal Pyrexia			18
I delberar i frema			

Of the 12 cases of diphtheria, 9 were children under 15 and one of these died. Admissions to the Isolation Hospital (including both civilian and service cases) were:

Scarlet Fever	• • •		118
Whooping Cough			5
Diphtheria			23
Erysipelas	• • •		3
Measles			22
Pneumonia			2
Puerperal Pyrexia			5

Jaundice	• • •		1
German Measles		• • •	2
Scabies and Impe	tigo		15
Observation			3
		-	
			223

IMMUNISATION.

The numbers of children who completed a course of immunisation against diphtheria during the year were as follows:

Under 5 years old ... 519 Aged 5 to 14 years ... 512

The immunising agent used is T.A.F. given in three fortnightly injections — every child is Schick tested for immunity after a 3 months interval. A very few (1 to 2 per cent.) are found to be still non-immune. These children are given two further injections, this time of A.P.T. with a month's interval between them, and after a further 3 months they are tested again.

It is estimated that by the end of 1943 50% of children under 5 and 62% of children 5 to 14 years' old, had received a course of immunisation, including of course, children treated in previous years, who were still under 15 at the end of 1943. These percentages continue to rise and are now approaching the 75% believed to be required for the stamping out of diphtheria, a preventable disease which killed more children during the war than the bombs of the enemy did.

WATER SUPPLY.

Scarborough has an abundant supply of water lying underground close at hand in the rocks of the middle oolitic strata. There are three pumping Stations, Irton (the main one), Osgodby (maintained as a standby), and Cayton Bay. The capacity of the Irton Station is more than four million gallons a day. The water here is coagulated and filtered and then chlorinated so as to leave not more than 0.15 parts chlorine per million in the water as supplied. The water at Cayton Bay needs no treatment.

IRTON.

Monthly full bacteriological examinations are made of the unfiltered and of the filtered water — the results are summarised in the following table :

•	No. of Examinations (1)	No. of colonies on agar in 3 days at 22°c (2)	No. of colonies on agar in 2 days at 37°c (3)	No. of coliform organisms in 100 c.c. (4)	Presence of Bacillus Welchii in 250 c.c.
Unfiltered water	12	28-680	10-180	14-160	Present 8 times
Filtered water	12	1-28	1-8	0-13	Absent 12 times

The filtered (unchlorinated) water was also examined three times a week for the presence of the coliform bacillus only. During the greater part of the year this was found to be either absent, or present in only small numbers (i.e. 0-13 per 100 c.c.). During the five weeks 26th August to the end of September it was found in larger numbers (2-90 per 100 c.c. rising on one occasion to 180).

CAYTON BAY.

Five full examinations during the year showed:

(1)	(2)	(3)	(4)	(5)
5	3 — 8	2 — 4	0	absent

Of three tests for Bacillus coli only two were negative and one positive (1 per 100 c.c.).

OSGODBY.

One full examination gave :

(1)	(2)	(3)	(4)	(5)
1	40	2 — 4	3	absent

One test for Bacillus coli only was negative.

The chlorinated water as supplied was examined regularly throughout the year for the presence of Bacillus coli, the samples being taken from premises in all parts of the town. On 87 occasions Bacillus coli was not found in 100 c.c.; on 4 occasions it was present in small numbers (1 to 5 in 100 c.c.)

SWIMMING POOLS.

Between June and September the North Bay Swimming Pool was kept under constant bacteriological observation. The water was tested 31 times for the presence of Bacillus coli; on 13 occasions this was absent from 100 c.c., on 14 occasions it was present in very small numbers (from 1 to 10 in 100 c.c.), and on 4 occasions it was present in higher numbers (viz: 25, 25, 50 and 35 in 100 c.c.) The total numbers of organisms growing on agar at 22°C in 3 days and at 37°C in 2 days rose on one occasion to 3,720 and 480 respectively. These results are regarded as very satisfactory in a pool so crowded with bathers.

HOUSING

No new houses were built during the year.

Eight houses were recommended for demolition — of these two were demolished, two were made fit, and in respect of the other four undertakings were given by the owners that they would no longer be used as dwellinghouses.

ANNUAL REPORT OF THE SANITARY INSPECTOR

to the

MEDICAL OFFICER OF HEALTH

Sir,

I have pleasure in submitting my Annual Report detailing the work of the Sanitary
Inspectors during the year, 1943.

Other foods	• • •	• • •	• • •	9	12	1	
		TOTAL		20 .	5	-	10

During the year the following animals were slaughtered:

Beasts	Calves	Sheep	Pigs
1,859	1,158	12,339	304

RATS AND MICE DESTRUCTION ACT, 1919.

Sustained efforts were continued during the year for the destruction of rats and mice. There were 639 complaints received and 2,262 inspections made during the year; advice and assistance were given in each instance.

A rat catcher is occupied in making a thorough investigation of all premises known to be, or suspected of, harbouring rats. His services have proved to be of great value in finding the points of entrance and thus making it possible for the premises to be made rat proof. Allotments, piggeries, tips and other suspected premises which rats usually infest are inspected frequently, and the necessary measures taken to eliminate the rodents found.

A total number of 625 bodies of rats were received at the Corporation Depot, Dean Road. In addition to this number, the Borough Rat Catcher caught a further 1,588 rats.

I am, Sir,

Yours faithfully,

R. H. STEPHENSON,

Chief Sanitary Inspector.
